R307 Series

1. Screw threaded locking male and female connector, simple in using, convenient in installation;
2. Brass plated finish, high-strength corrosion resistance and electrical conductivity could effectively response to the temperature rise changes caused by the current;
3. Selectable soldering and screw connection could meet customers' different demand;
4. Nylon material, stable electrical performance, high-strength resistance to pressure, anti-heat, anti-explosion, and corrosion;
5. Increases the design flexibility: the use of connectors gives engineers greater flexibility in designing and integrating new products, as well as in composing systems with components.

Simple parameters
